

PDF Inspector Comprehensive Showcase

Demonstrating Full Layout, Table, and Typography Detection

This document is specifically crafted to exercise the layout engine of Firecrawl's pdf-inspector.
It contains bold emphasis, italic commentary, and structured data elements.

Structured Lists

- High-precision spatial text extraction with font statistics
 - Dual-mode table detection with rectangle and heuristic alignment
 - Multi-column newspaper reading order recovery
1. Parse xref table and sample page content streams
 2. Extract positioned TextItems and PdfRects
 3. Synthesize clean, structured Markdown output

Code Block (Monospace Font)

```
import { processPdf } from '@firecrawl/pdf-inspector';
const result = processPdf(pdfBuffer);
console.log(result.markdown);
```

Table 1: Benchmark Comparisons

Engine	Reading Order	Table TEDS	Latency (200 docs)
pdf-inspector (Rust)	0.915	0.814	0.470s
LiteParse	0.913	0.693	0.750s
PyMuPDF4LLM	0.886	0.401	17.117s

Page 2: Multi-Column Layout & Metrics

Parallel Architecture Analysis

Column A: Spatial Grouping

The parser detects multi-column layouts by projecting vertical gutters across text items. Lines within each column are grouped sequentially before advancing to the next column.

Column B: Reading Order

This ensures newspaper-style and academic paper columns are read top-to-bottom per column rather than interleaved horizontally. Full ToUnicode CMaps resolve all custom glyph identifiers.

Table 2: Quarterly Operating Breakdown

Segment	Q1 Revenue (\$M)	Q2 Revenue (\$M)	YoY Growth (%)
Cloud Compute	\$1,245.50	\$1,480.20	+18.8%
Vector Search Engine	\$820.10	\$1,095.40	+33.6%
AI Agent Workflows	\$450.00	\$710.80	+57.9%
